

# ➤ Logistics Vehicle System Replacement (LVSR)

## DESCRIPTION

The LVSR Program will replace the current Marine Corps heavy tactical wheeled vehicle, the Logistics Vehicle System (LVS). The LVSR will transport bulk liquids, ammunition, standardized containers, bulk/breakbulk/palletized cargo, and bridging equipment. The vehicle will also perform heavy wrecker/recovery missions and tow engineer equipment and combat vehicles with the M870A2 semi-trailer.

## OPERATIONAL IMPACT

The LVSR fills a MAGTF requirement for a heavy ground logistics distribution system that is highly mobile, efficient, extremely reliable, and flexible. It also will be capable of operating over increased distances with increased payloads. This system will rapidly distribute all classes of supply and possess a self-loading/unloading capability to reduce dependence on external materiel-handling equipment. The LVSR will be employed in the Force Service Support Group, the Marine Division, and the Marine Aircraft Wing.

## PROGRAM STATUS

The LVSR is expected to complete the requirements approval process and enter the system development and demonstration phase in early FY 2003. Procurement is scheduled to begin in FY 2006.

### PROCUREMENT PROFILE:

The Procurement Profile is under development.
